

Claims

5

15

- 1. A method for antigen independent activation of T cells comprising contacting T cells with a combination of cytokines.
- The method of claim 1, wherein the T cells are contacted with at least two of the following:
- i) interleukin-2;
 - ii) interleukin-6; and
 - iii) tumour necrosis factor a

or functionally equivalent fragments thereof.

- 3. The method of claim 1 or 2, wherein the T cells are naive T cells and/or memory resting T cells.
- 4. The method of any one of claims 1 to 3, wherein the 20 T cells are naive CD45RA* cells and/or memory resting CD45RO* cells.
- The method of any one of the preceding claims, wherein the concentration of interleukin-2 is from 100 to 400 U/ml, the concentration of interleukin-6 is from 400 to 600 U/ml and the concentration of tumour necrosis factor α is from 15 to 35 ng/ml.
- 6. The method of any one of the preceding claims, wherein the concentration of interleukin-2 is from 200 to 300 U/ml, the concentration of interleukin-6 is about 500 U/ml and the concentration of tumour necrosis factor α is about 25 ng/ml.
- The method of any one of the preceding claims, wh rein tells are activated in vitro.
 - A method for obtaining increased lymphokine production

from a T cell culture, comprising activating the T cells using the method of claim 7.

- The method of any one of claims 1 to 6, wherein Tcells are activated in vivo.
 - 10. The method of claim 9, wherein the activation of th T cells in vivo leads to an enhanced immunological response.

10

11. A method of therapy comprising activating in a human or animal subject T cells using the method of claim 9 or 10.
